#### **DETAILED ACTION**

## Specification

1. The amendment filed May 11, 20 is objected to under 35 U.S.C. 132(a) because it introduces new matter into the disclosure. 35 U.S.C. 132(a) states that no amendment shall introduce new matter into the disclosure of the invention. The added material which is not supported by the original disclosure is as follows: "microinches".

Applicant is required to cancel the new matter in the reply to this Office Action.

### Claim Rejections - 35 USC § 112

- 2. The following is a quotation of the first paragraph of 35 U.S.C. 112:
  - The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.
- 3. Claims 42, 44, 46-52, 69 and 70 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claims contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Claims 42 recite the average surface roughness being in microinches which are not disclosed in the original specification.

#### Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

5. Claims 42, 44, 46-52, 69 and 70 are rejected under 35 U.S.C. 103(a) as being unpatentable over Craig et al (5,686,657).

The Craig et al reference discloses a method prepare a gas distribution assembly comprises: providing a plurality of metal layers 602A, 602B (Fig. 7 and 8) wherein the metal layer of a stainless steel, chemically or electrochemically etching at least one feature through at least one of the metal layers; aligning the plurality of metal layers; and diffusion bonding the metal layers (col. 5, lines 50-67).

Although the Craig et al reference does not explicitly disclose that the metal layers have a roughness in certain ranges such as 0.1 Ra to about 30 Ra, a thickness in the range .0005 inch to about 0.06 inch and the diffusion process is performed at certain temperature and pressure ranges, it would have been obvious to one of ordinary skill in the art at the time the invention was made to prepare the metal layers of Craig et al assembly to have a best roughness range and thickness range to fit the diffusion welding process because it is known that the diffusion welding requires careful preparation with regard to roughness, thickness, temperature and pressure (see US 3,530,568 cited in col. 5) in order to optimize the result and performance. See In re Aller, 105 USPQ 233, using the optimum or workable ranges involves only routine skill in the art.

### Response to Arguments

6. Applicant's arguments filed on May 11, 2006 with respect to claims 42, 44, 46-52, 69 and 70 have been considered but are moot in view of the new ground(s) of rejection.

#### Conclusion

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Huyen Le whose telephone number is 571-272-4890. The examiner can normally be reached on Monday-Friday from 9:00 am to 5:00 pm.

8. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Justine Yu can be reached on 571-272-4835. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
